Monthly Newsletter from the leader in sandbox software for DevOps and Cloud Automatiom

For our customers and partners in the United States, we wish you a Happy Thanksgiving Holiday. For our global customers and partners, it is business as usual. As we enter the last month of the calendar year, we are evaluating the roadmap of our products and preparing for 2019. We will have some exciting new announcements to make in January. Meanwhile, we encourage our customers on different CloudShell versions to take a look at what's in Release 9.0. The webinar with CA technologies also provides good information on how you can speed up DevOps by automating and managing environment complexity. If you've not already explored it, this issue brings you an informative new webinar. Dos Dosanjh our Director of Technical Marketing pens a couple of blogs that be good reading over the holiday break.

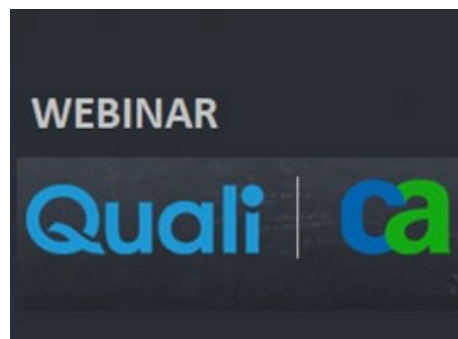

In the Spotlight

On-demand webinar:
What's new with CloudShell 9.0

In the Media

[Article] [Steps You Should Be Automating in the SDLC](#) – “Security and compliance automation is the most important part of the software development lifecycle. The ability to assess software code and determine the vulnerability by providing a security rating is critical in preventing catastrophic attacks.” Dos Dosanjh, Quali.
DEVOPS Digest

[Article] [What You Should Be Monitoring to Ensure Digital Performance](#) – PMdigest asked experts from across the IT industry for their opinions on what IT departments should be monitoring to ensure digital performance. Part 4 covers the infrastructure, including the cloud and the network. “IT departments can determine the amount of investment required to modify the network and application components based upon data performance. Data visualization formats can also be modified to function on the status quo infrastructure until the upgrade investments are in place.” Dos Dosanjh, Quali. *APMdigest*

[Article] [Cybersecurity Future Trends: Why More Bots Means More Jobs](#) – *IBM Security* Intelligence covers artificial intelligence taking a bigger role in cybersecurity, drawing on insights by Quali’s Shashi Kiran on the subject.

New Blogs

[Netflix like approach to DevOps Environment Delivery](#) - “The “Netflix like” approach to discover, sort, select, view and consume content can be modeled and utilized by DevOps teams to deliver software in a CI/CD model. The Quali CloudShell example for Environments as a Service follows that model by making it easy to set up workflows to accomplish application deployments.” *Dos Dosanjh, Director of Technical Marketing, Quali*

[Augmented Intelligent Environments](#) - “The opportunity to orchestrate augmented intelligence environments has now become a reality. Organizations are now able to leverage insights from these environments which result in better decisions regarding business, security and technology investments.” *Dos Dosanjh, Director of Technical Marketing, Quali*
