

# Qualifyi

Volume 7, 2018

Monthly Newsletter from the leader in sandbox software for DevOps and Cloud Automation

July is typically a slow month in the business world, but our engineering team has been busy: Quali just released the EA version of the highly anticipated CloudShell 9.0. This major release will give customers the ability to further their infrastructure utilization efficiency with the snapshot and restore add-on and significantly accelerate Cloud transformation initiatives with Cloud Provider templates.

These features and the direction of the CloudShell platform are very much aligned with the findings of a report just released by 451 Research that you might find interesting: "How Quali supports the digital transformation agenda". You can download the report following the link below.
